

BDD SpecFlow WebDriver

Online

Course Length

3 Days (3 x 3 hour sessions on-line, please note that session length may vary depending on number of delegates and other factors)

Delivery Method

Live online training course (Instructor-Led), delivered over 3 sessions of approximately 3 hours each. You will be provided a workbook for the course and homework exercises between sessions.

Description

This comprehensive course covers all the essential principles to get you up and running in Behavior-Driven Development (BDD) using Microsoft Visual Studio, SpecFlow and WebDriver.

Designed for beginners of BDD and SpecFlow, it takes the new-comer through all the basic techniques of writing Feature Files in Gherkin, to writing the associated Step Definitions and code in SpecFlow & WebDriver C#, to executing from the command line.

Course Objectives

- understand the required Visual Studio Extensions and Libraries to use SpecFlow & WebDriver
- understand how to structure your automated SpecFlow project
- gain a full understanding of how to write good Gherkin and Step Definitions
- understand how to refactor and re-use common Methods for Steps
- by the end of the course you should have a thorough understanding of how to develop well-written Feature Files and Scenarios, How to manage Step Definitions and write associated Methods, how to organise the SpecFlow project and how to integrate into the POM framework

Technologies used in this course

- Visual Studio 2015, SpecFlow, Nunit, WebDriver C#

Course Pre-requisites

- A basic understanding of writing Selenium WebDriver Scripts (we use C# bindings)
- Some programming experience would be advantageous - The course is based on using WebDriver with C# & NUnit.

Key Points

Introduction to BDD

A background to BDD and its benefits. The process of BDD. An overview of the tools available, terminology.

Introduction to Gherkin

Feature Files, introduction to the Gherkin language, basic syntax

More Gherkin

Using the Background fixture, Parameters, Doc Strings, Examples and Data Tables, using Tags to organise execution, commenting

Installation of the SpecFlow Framework

SpecFlow Visual Studio plugin, installing the SpecFlow Libraries, WebDriver and other dependent libraries. Creating a project structure, creating a Feature File, formatting and execution of Feature Files

Step Definitions & Code Binding

Creating our Test Classes, Using prototype step definitions, fixing errors for executing feature files, creating step definition Methods, expanding Methods with Parameters

Deconstructing Step Definitions and Regular Expressions

Step Definition syntax, using Regular Expressions, using multiple annotations for one Method, re-using Methods for more than one Scenario

Handling Tables

Scenario Outline, In-line Step Table Iterating,

Executing the SpecFlow Features

Using SpecFlow, Using Tags, Results & Reporting, Command line execution, SpecFlow Fixtures for Execution Flow.

Integrating SpecFlow into the POM

Using SpecFlow & WebDriver under the Page Object Model.

3

Days

The introductory course that takes you from beginner through to writing effective Feature Files and then Automating them using WebDriver

Recommended for anyone new to BDD and SpecFlow
